

COVER LETTER

Dear Hiring Manager,

I am applying for a **Full-Stack Software Engineer position** within your engineering team. With nearly five years of professional experience, I build scalable and secure web applications using **React.js, Next.js, TypeScript, FastAPI, PostgreSQL, and Redis**. My background spans responsive frontend and UI development, backend API design, authentication, database workflows, real-time communication, AI-powered products, testing, and end-to-end feature ownership.

At **Velotio Technologies**, I develop full-stack AI and recruitment platforms using **Next.js, FastAPI, PostgreSQL, SQLAlchemy, and Alembic**. I have built authenticated backend APIs, database-backed workflows, and adaptive interfaces that stream tool calls, LLM actions, OpenSearch results, and evaluation outcomes through Server-Sent Events. I also led the development of a careers platform spanning responsive interfaces, API design, database models, migrations, SEO optimisation, debugging, and production delivery.

Previously, as a **Software Development Engineer I at Gigmo Solutions**, I developed real-time payment and chat systems using **React.js, TypeScript, FastAPI, PostgreSQL, SSE, and WebSockets**. My work included transaction APIs, message persistence, authentication, role-based access control, and LLM-powered recommendation workflows. I further strengthened these skills through projects such as **QuickPad** and **FormForge**, implementing Redis pub/sub, collaborative editing, JWT-based access, rate limiting, conditional workflows, response collection, and analytics.

I am interested in contributing to an engineering team that values **scalable architecture, reliable backend services, intuitive user experiences, and strong engineering practices**. The opportunity to build and improve production applications across frontend and backend systems closely matches my experience and career goals. I would welcome the opportunity to discuss how my background in full-stack development, real-time systems, and AI-powered applications could contribute to your team.

Yours faithfully,
Jai Sehgal
